Delaware’s Plan
Managing the Health Care Needs of Children with Medical Complexity

Breakfast Congressional Briefing
Friday, October 5, 2018

LEGISLATION

➢ House Substitute No. 1 for House Bill No. 275
➢ Budget Epilogue Section 141: Address the needs of Children with Medical Complexity (CMC)
➢ Comprehensive Plan for CMC
➢ Public Process
KEY QUESTIONS AND GOALS

**Questions**
- What do we want to achieve?
- What are the vision and goals that drive our work?
- What barriers limit CMC’s ability to receive appropriate care?
- What are some possible solutions?

**Goals**
- Clearly define and identify the population.
- Assess access to services.
- Evaluate models of care.
- Analyze the relationships between insurance payers.
OUR DEFINITION: CHILDREN WITH MEDICAL COMPLEXITY

Children with medical complexity are a subset of children and youth with special health care needs because of their extensive health care utilization. For the purpose of this plan, a child is considered medically complex if she/he falls into two or more of the following categories:

- Having one or more chronic health condition(s) associated with significant morbidity or mortality;
- High risk or vulnerable populations with functional limitations impacting their ability to perform Activities of Daily Living (ADLs);
- Having high health care needs or utilization patterns, including requiring multiple (3 or more) sub-specialties, therapists, and/or surgeries;
- A continuous dependence on technology to overcome functional limitations and maintain basic quality of life.

PAYERS

Goals of the Payers workgroup:

- Standardize medical necessity documentation and review the MCO authorization processes so as to reduce redundancy of information, avoid delays in care and/or services, streamline the authorization process, and decrease confusion among providers, payers, and caregivers.
- Empower parents to navigate the appeals process by making it more transparent and less intimidating.
ACCESS

Goals of the Access workgroup:
- Identify barriers and challenges to accessing care for children with medical complexity.
- Identify person-centered solutions to access care using a team approach (e.g., multidisciplinary team, family).

MODELS OF CARE

Goals of the Models of Care workgroup:
- Prospective identification of Children with Medical Complexity (CMC).
- Patient and family-centered care (PFCC) is the main focus across all levels of care and services.
- Proper and timely management of care delivery.
- Appropriate resource identification and allocation.
DATA WORKGROUP

- Nearly 20 percent of all US children have a chronic and/or complex health care need requiring physical and behavioral health care services and supports.

- A smaller group of children, which is increasing in number, have complex health care needs, with about 4 percent estimated to be medically complex.

RECOMMENDATIONS FROM THE STEERING COMMITTEE

- Keep the Children with Medical Complexity Steering Committee in place
- Perform a comprehensive data analysis as it relates to children with medical complexity
- Strengthen systems of care for children with medical complexity
RECOMMENDATIONS FROM THE STEERING COMMITTEE

- Be clear in contracts about the role of managed care organizations in identifying and providing services to children with medical complexity
- Develop and/or strengthen existing resources for caregivers, providers, and the larger community involved in the care of children with medical complexity
- Strengthen the network of home health providers for children with medical complexity

THANK YOU
